Novabrik – Mortarless Brick Technology for Commercial Construction

Newark, Del. – December 2, 2009 – Now commercial contractors and architects have a more cost-effective, long-lasting alternative to brick for building exteriors. Called [Novabrik](#), this innovative, mortarless brick technology saves money on installation and never needs painting, prevents mold and won't warp, dent or fade.

Developed by Novabrik International Inc. in Montreal, Quebec and with offices in Newark, Del., this mortarless brick is warranted to last 50 years.

"We are pleased that our durable, reliable and low-maintenance brick product is being so well-received in the American marketplace," says Simon Gauthier, president and chief executive officer, Novabrik. "As the only product of its kind, Novabrik is a snap to install, is the perfect siding solution for light commercial structures, schools, banks, low-rise office buildings, hotels and retail establishments and has more staying power than the more traditional exterior options such as brick and concrete."

Novabrik's high-strength concrete bricks overlap and interlock to create a strong, water-resistant brick veneer. Novabrik can be installed on wood and steel studs and concrete structures. Because the bricks hang on the wall, no brick ledge or steel support is necessary.

The installation cost of Novabrik is often 20 to 25 percent less than conventional masonry brick. Additionally, Novabrik can be installed year-round, even in freezing temperatures allowing for no additional installation costs during winter months. This self-supporting property makes Novabrik a perfect product for either new or renovated commercial buildings. Check out the installation video [here](#).

More substantive than traditional brick, Novabrik can withstand the effects of severe weather, high winds and fire. Its special "rain-screen" design prevents water from penetrating the wall from the outside and the mortarless construction promotes air flow in the wall cavity, thus removing any moisture coming from the inside and helping to prevent mold decay.

Novabrik is available in a split or smooth surface, nine different colors and 4-inch X 8-inch brick sizes. Custom colors are available as well. A complete line of accessories complements the Novabrik system including interior and exterior corners, window sills, wainscot caps and corner strips.

Because Novabrik can be installed by contractors without masonry skills, the installed cost of the mortarless brick system is less than that of conventional brick walls. For details on the complete line of Novabrik and to locate the nearest dealer, visit www.novabrik.com.
